## **Data Collection Notes**

### **Currently / Challenges:**

- Dr. Habib & students work at Dal
- New! Police reports doing more re: accidents involving pedestrians
- Data collection happening, but storage different, different jurisdictions, in pieces
- Service NS & others collect different data
- Sharing / using / analyzing procedures on the issue & slow
- Issue re: breaking out locations
- Consistency in reporting could be an issue – systems don't match, have 'chunks' but not holistic view

### **Improvements / Next Steps:**

- NS Chiefs plus Transport & Service NS all get together; develop partnerships
- Get consistency in data collection
- Get officers to use GPS
- Don't rely on police only to collect data – a call could be placed to 311 to direct concerns about potential situations, but needs to be consistent data collection
