## Waterfront Development

June 5, 2012

Mr. Terry Smith-Lamothe  
Chair- Design Review Panel  
Halifax Regional Municipality  
P.O. Box 1749  
Halifax, NS  
B3J 3A5

Dear Mr. Smith-Lamothe:

**Re: WDC Cunard Block Project- Design Review Committee Briefing**

Thank you in advance for the opportunity to present the materials we have developed for the Cunard Block to the Committee. We wanted to ensure that the Committee had the opportunity to review the materials that we will be issuing as a RFP for the project in June so that we could receive feedback to assist in our evaluation of the proposals we will receive from the development community in September.

Over the past 24 months we have been working closely with HRM staff to develop the proposed development concept for the site that means WDCL's development principles and the objectives of the MPS, and we would like to thank them for their assistance the Concept and Design Development stages of the project.

Attached to this package you will find the following materials:

- Architectural Drawing Set;
- Site Service Plan, and;
- Property Survey.

We will present additional materials including the 3D model for the project at your meeting scheduled for Thursday June 14<sup>th</sup>.

In the interim do not hesitate to contact me should you have any questions.

## **Project Information:**

The Cunard Block is a 0.6 hectare site (1.5 acres) located in a key waterfront location between Bishop's Landing and the new Emera Corporate Headquarters. The site is currently used as a paved parking lot and is prime opportunity site on the Halifax waterfront. Immediately adjacent to the eastern tip of Morris Street, the site holds a strategic location along a major waterfront corridor, with stunning views of the Halifax Harbour, Georges and McNab's Islands, and the Dartmouth waterfront. The site is also one of WDCL's most distant southerly properties on the waterfront. With the redevelopment of the Emera head office, the Cunard Block redevelopment will complete the pedestrian experience with this new built form on the south side of the waterfront. The site's location, surrounding neighbourhood context, and prominence on the waterfront make it a logical site for a significant mixed use development.

The project is being led by Waterfront Development Corporation Limited (WDCL), who is charged with 'activating' the waterfront by:

- building a continuous waterfront boardwalk at the waters edge,
- creating destination public spaces along the waterfront,
- sponsoring year-round events and signature tourism events to bring people to the waterfront,
- developing active ground-floor uses for buildings on the waterfront, and
- maximizing the economic development potential of the waterfront.

This project is somewhat of a first for WDCL; instead of asking developers to lead the design process by responding to a design brief, WDCL is advancing the design process to find the right balance of high quality urban development, activity generating uses on the waterfront and high quality open space that will improve the waterfront experience. WDCL expects that by advancing the design they will (a) provide clarity for the private sector, (b) enable WDCL to find the best development partner, (c) reduce uncertainty of regulatory approval process, and (d) compress timelines. While the eventual private development partner will have some measure of design flexibility at the end of this process, it is anticipated that this approach will provide WDCL with greater certainty for both the timing and design outcomes.

The project is consistent with all but a few of the policies outlined in the LUB. The 17-storey high-rise mixed-use development includes:

- almost 14,000 sq.ft. of groundfloor commercial space. This includes a 2,200 sq.ft. commercial site on the corner of Morris Street and Lower Water St, a 3,350 sq.ft. commercial pad at the other corner of the site on Lower Water Street, and 8,300 sq.ft. of Commercial space along the waterfront.
- a stand-alone public washroom and 1,100 sq.ft. commercial service building.
- 325,000 sq.ft. of gross residential space (including 296 units),

- 550 underground parking spaces,
- 26,000 sq.ft. of public plaza event space (including boardwalks) plus 500' of public boardwalk (9,300 sq.ft.) and several rooftop gardens. This means that almost 40% of the site is dedicated to open space (excluding rooftop gardens and public spaces).

The project will be a major development for Halifax and the waterfront and a significant public open space node along the south waterfront boardwalk.

#### **Design Rationale:**

As one of the preeminent development sites on the Halifax Waterfront, the Cunard Block design incorporates the development principles of both WDCL and HRM for important waterfront sites. WDCL strives to plan and coordinate developments that:

- Maximize continuous public access to the water's edge;
- Create public spaces that are of high quality, rich in amenities and flexible in their use;
- Preserve and interpret historical uses, activities and forms of the waterfront, and conserve lands with marine industrial use potential;
- Provide active and dynamic year-round destinations;
- Integrate well with, and support, the surrounding urban fabric;
- Exemplify architectural quality, have animated streetscapes, and respect and support activity at the water's edge, and;
- Are economically and environmentally sustainable.

HRM's development objectives for the Southern waterfront are to ensure:

- consistent and complete street wall along Lower Water Street
- Buildings present a slender face to Lower Water, with their long dimension perpendicular to Lower Water Street.
- Consistent public boardwalk
- Public Open spaces are provided where the eastward extension of (Morris Street) intersects the boardwalk
- human scale
- adequate consideration of sea level rise
- all adequate buildings setback from the ordinary high water mark
- building height immediately adjacent to the boardwalk steps up

- Long unbroken runs of building along the boardwalk or water's edge are not permitted.
- high quality, low maintenance site furnishings

There are several encumbrances on the Cunard Block properties, which significantly influence the physical form of the development. These include:

- View Plane 6 penetrates the north eastern end of the Cunard block. The Land Use Bylaw states that "no building or structure shall protrude through a View Plane". The view plane limits the height of any structure on the Cunard Block within the view plane to 8.7 m. on the north end to 3.8 m on the south end.
- Water-Lot C-5. Is owned by the WDCL but is a post-confederation waterlot the title to which is disputed by the Halifax Port Authority. For this reason, WDCL has designed the project so that none of the parking structure or buildings can be sited on lot C-5.
- Sea Level Rise: Any new development on the water must give due diligence to the impacts of sea level rise. For the Cunard Block, the finished floor of all commercial or residential uses has been raised by 18" above the boardwalk height of 8.2' above high water. This will allow the boardwalk to transition from its current height to a future 18" higher boardwalk when it is rebuilt over the next few decades (note that this section of boardwalk was just recently rebuilt and probably has a +20 year life).
- Morris Street View Corridor. A detailed land survey has confirmed that the 50' Morris Street view corridor does not cross the Cunard Block property. Only 100' of public road right-of-way extends into the Emera property significantly limiting the type of uses that can border the Emera property due to lack of public access. The view corridor limits Emera's development potential. The site plan shows a public waterfront walkway on Emera's land to be built by WDCL if an agreement can be negotiated for its construction.

The final design proposal for the Cunard Block successfully integrates the constraints of the encumbrances and the HRM/WDCL development objectives by:

- creating a building massing that is consistent with the Land Use Bylaw (unbroken street-wall, stepbacks, orientation of the tower, stepbacks from the waterfront, connection of Lower Water Street to the Waterfront, etc.),
- creating active ground floor commercial uses on the waterfront and on Lower Water Street,
- creating a series of high-quality, landmark public open spaces along the waterfront,
- maintaining a continuous public boardwalk along the waters edge,
- providing public washroom facilities and adjacent event space along the boardwalk,
- ensuring the 17-storey tower creates a slender face along Lower Water Street.

- Stepping back and massing of the building to reinforce the human scale of the development,
- accessible but out-of-sight parking.
- Green roofs and public roof decks and bicycle friendly development.
- The building and adjacent open space successfully balance public open space objectives with development feasibility and unit yield. The proposed development will be a significant landmark development for Halifax and Atlantic Canada.

### **Proposed Public Benefit:**

As noted, the development maintains almost 40% of the site as public open space. This includes almost 500' of public boardwalk, public washroom facilities, a raised (18") large public plaza space, significant seating space along the waterfront using the 3 risers of the steps, universally accessible space, a commercial esplanade on the waterfront, A Cunard Landing drop-off plaza, a series of smaller plazas and open spaces and a major public trail along the Morris Street view corridor connecting Lower Water Street to the boardwalk. The building will provide additional private open space in the form of rooftop gardens and public terraces.

### **Wind Assessment:**

Wind data from the Shearwater Airport (1953 to 2000) were assembled and analyzed using Windrose PRO 2.3 to understand the intensity, frequency and direction of winds at the Cunard Block development site. The resulting diagram (Fig 1.) shows that the highest and most frequent wind speeds come from the west and south. The relative distribution of higher wind speeds are somewhat constant from the north, north-west, and south-west. High winds from the north-east, east, and south-east are substantially infrequent when compared to other directions. This has visible implications for development on this site as is shown in Fig 2. Since Lower Water Street is directly west of the new development, the infrequent winds from the east and north east mean that there will be reduced potential for impacts on pedestrians walking on Lower Water Street as a result of concentrated winds and turbulence from the new building. The more prevailing high winds from the north-west, west, south-west and south, will have very little impact on sidewalk pedestrians due to the position of the building to the east of the street. Winds from these directions could have a more pronounced impact on certain sections of the boardwalk.

Looking at the seasonal wind impacts (Fig 3.), during the summer, most of the wind comes from the south (12% of the time) and southwest (10% of the time). Winds that may impact the sidewalk (those from the north-east, east and south-east) have a cumulative potential of 16% of the time. That is, the building only has the potential to change sidewalk wind conditions at most 16% of the time in the summer. IN the winter, the prevailing winds shift from the west, north-west and north. These winds will have very little impact on the

sidewalk. During high wind conditions (>18mi/hr), only the winds from the east (that occur 1.25% of the time) will impact pedestrians on the sidewalk.

Changes in wind speed as a result of buildings vary depending on wind direction and building morphology. On the upwind side of the building (west and south side; or on the Lower Water Street side) there can be more turbulent wind but little change in wind speed. On the downwind side of the building (north and east; or the boardwalk side), wind speed is often reduced and turbulence increased up to 8x the height of the building in what is often referred to as the “quiet zone”. On both sides of the new building, ‘streamlines’ can occur where the wind is accelerated through the openings between buildings. The area where this will be most impacted as a result of the new building will be the Morris Street extension area when winds prevail from the south-west (about 10% of the time during the summer) and 6% of the time during the winter.

The stepped nature of the building design (vertically and horizontally) as a result of the LUB setback requirements will further reduce the impacts of downward drafts on adjacent sidewalks. The introduction of wind tolerant trees along the Morris Street connector will further reduce the impacts of gusting winds on this future pathway.

The location of the site on the western side of the Halifax Harbour and the stepped building design are not expected to have any appreciable impacts on the sidewalk or boardwalk as a result of the development. The one exception that will need deliberate mitigation would be the Morris Street extension walkway that will need to be planted with a wind tolerant species for the occasional south-western winds coming down Morris Street.

Figure 1. Wind Rose for Shearwater Airport. Diagram shows winds in the FROM direction.

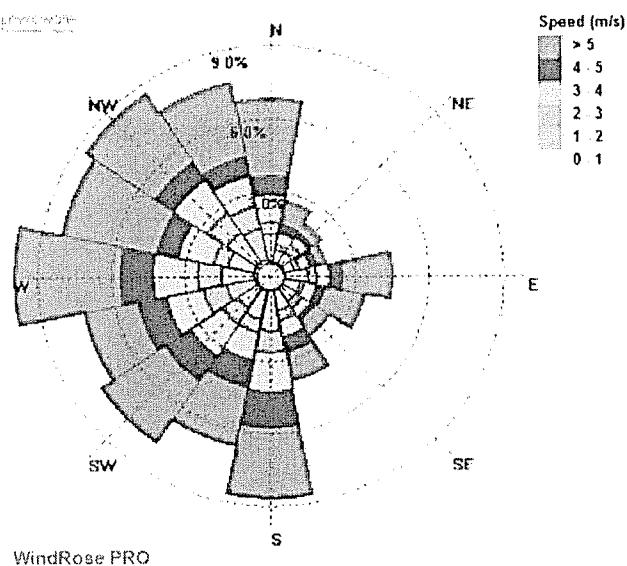

Figure 2. Wind Rose overlain on site plan

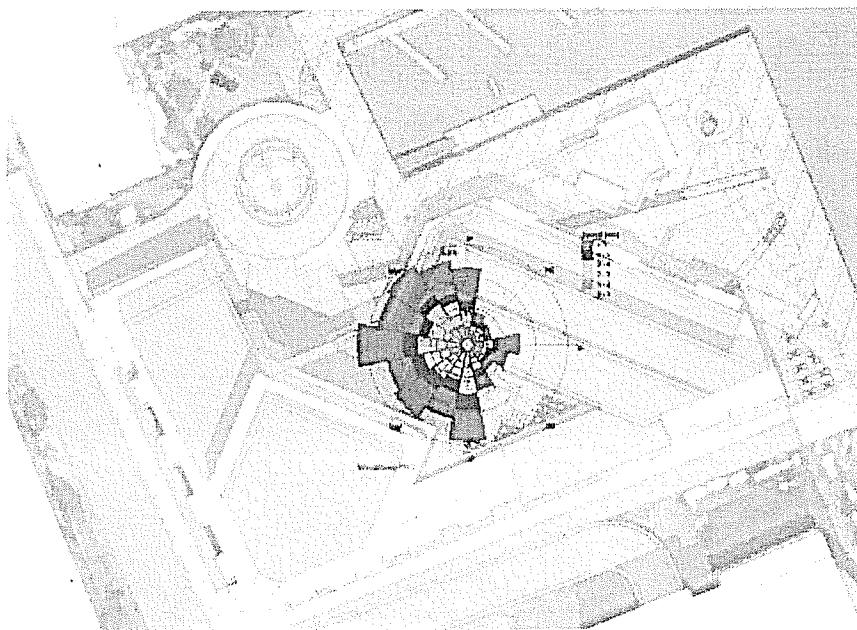

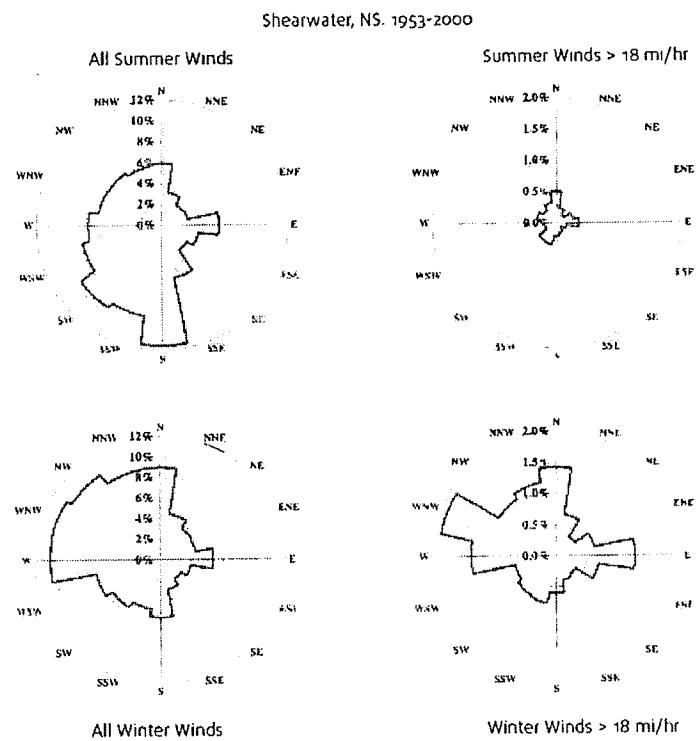

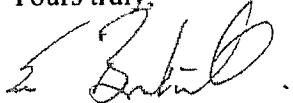

Figure 3. Seasonal Wind Direction for Shearwater Airport

**Variance Requests:**

A summary of the LUB compliance is presented in the attached table. The non-conforming items are listed in red along with the rationale for the need for a variance. Consideration of these variances is requested according to Sections 9 (8) & 10 (14) and with reference to section 3.4.9 of the Secondary MPS.

Yours truly,

Eric Burchill  
Director of Planning and Development

Encl. (1)

CUNARD BLOCK: LUB PRE-APP CONFORMANCE

CUNARD BLOCK: PRECINCT 1, SOUTHERN WATERFRONT		Cunard Block Development Compliance	
LUB Section	Page Standard		
Permitted Land Uses	18 Listed	Compliant	
Residential Units: Dwelling Unit Mix	18 1/3 of Units to be 2-bedroom	Compliant	
Storm Surge Protection	19 No building less than 2.5m > High Water Mark	Compliant: Building raised to 2.95 Geodetic	Viewplane #6 (which ranges in height from 8.7-49m taken from the average site grade).
Number of Buildings on Lot	22 1 Main building on one lot	Compliant: Although the site plan shows 2 buildings centre), the 2 buildings are linked by one large and will be considered 1 development.	
Building Height	22 Maximum Post Bonus Height 49m and 19m.	Compliant: Under the 19m portion, the smaller	
Landscaping for Flat Roofs	23 All flat roofs not required for architectural or mechanical equipment shall be landscaped	Compliant: The height of the groundfloor corner is 6.4m. Lower Water Street slopes down Landing corner where the commercial height is have varying heights.	
Land Uses at grade	23 Ground floor of the building on Lower Water Street shall have a floor to floor height of 4.5m	Compliant: Most of the buildings are oriented tower is several degrees off of the viewplane on	
View Plane requirements	23 No building shall protrude through a viewplane	Compliant: Viewplane #6 passes through the site	
View Plane requirements	23 No building shall be constructed parallel to a viewplane.	Compliant: Most of the buildings are oriented tower is several degrees off of the viewplane on	
Prohibited external Cladding	24 Material list	Compliant	
Streetwall Height:	24 Maximum streetwall height of 18.5m	Compliant: Street frontage length is 190' (see s 185).	
Streetwall Width	26 Streetwall width of no less than 80% of the Lower Water Street frontages.	Compliant: 4.5m shown	
Streetwall Stepbacks	26 Minimum of 4.5m for that portion of the building that is greater than 33.5m high	Non-compliant: Using clients in the shallower parking structures have access via stairs and/or stairs to the rear. Non-compliant: The maximum setback is 5.5m from interior lot lines	
Building Setbacks	27 No setback from interior lot lines for buildings <18.5m	Compliant	
Mid-rise buildings	27 For buildings between 18.5m to 33.5m high building setback of 5.5m from interior lot lines	Non-compliant: 4.5m shown. The Matrix Street 18.5m building slightly exceeds 18.5m and has a 1.5m set back from the exterior lot lines so does not	
High-rise buildings	27 For buildings greater than 33.5m high, building setback of 11.5m from interior lot lines	Compliant	
Precinct 1: Additional Requirements	29 Multiple buildings on a lot shall be permitted	Compliant	
Precinct 1: Additional Requirements	29 All buildings setback 8m from the ordinary high water	Compliant	
Precinct 1: Additional Requirements	29 Within 50m of high water: no building to exceed 12.5m plus 1m height for every 1m of setback from the 8m setback	Compliant	
Precinct 1: Additional Requirements	29 The width of any building face parallel to ordinary high water shall not exceed 21.5m	Compliant	
Precinct 1: Additional Requirements	29 Any portion of building above 33.5m parallel to Lower Water St shall be a maximum width of 21.5m and a maximum depth of 38.5m	Non-compliant: Lower Water St is 18.5m wide. A 1.5m high wall and 1.5m setbacks are required. This is 1.5m shorter than the 38.5m	
Post Bonus Height Provisions	31-32 Listed provisions	Compliant: We will meet all required provisions	
Signs	33-36 Listed provisions	Compliant: We will meet all required provisions and interpretive signage that will be installed	
Parking	37-39 Listed provisions	Compliant: We will meet all required provisions	
Bicycle Parking	40-42 Listed provisions	Compliant: We will meet all required provisions
